PRIVACY NOTICE

LUT Kyyti ride-sharing service

EU General Data Protection Regulation (2016/679), Articles 13 and 14

Date of issue: 24 October 2026

Version 0.2 – draft for review before the pilot. Items marked [To be confirmed] are still open.

This privacy notice explains how personal data is processed in LUT Kyyti (kyyti.net), a web service that helps members of the LUT and LAB community share rides between and around their campuses. It describes what data is processed, why, who can see it, how long it is kept and what rights users have.

1. Data controller

LUT University
Business ID: 0245904-2
Address: Yliopistonkatu 34, 53850 Lappeenranta, Finland
Phone: +358 29 446 2111
Website: https://www.lut.fi

The service is also used by staff and students of LAB University of Applied Sciences, who sign up with their lab.fi email address. [To be confirmed: whether LAB University of Applied Sciences is a joint controller for the data of its users.]

2. Controller's contact

LUT Kyyti service
Contact form: https://kyyti.net/contact
[To be confirmed: name, title and email address of the person responsible for the service.]

3. Data Protection Officer

Legal Counsel Ilona Saarenpää
Phone: +358 29 446 2111 (switchboard)
Email: dataprotection@lut.fi

4. Purpose of personal data processing

Personal data is processed to:

- create and maintain user accounts, and confirm that each user has a LUT or LAB email address;
- authenticate users, including the optional two-step verification;
- let users offer rides, search for them and ask to join them, including recurring rides on chosen days, and post rides to everyone or only to chosen groups;
- let drivers and passengers of the same ride (ride partners) see each other's names and the contact details each has chosen to share;
- let users create and manage groups;
- notify users of requests, answers and changes in the service, by email and, if they turn them on, as push notifications;
- answer messages sent through the contact form;
- keep the service secure, and prevent and investigate misuse;
- compile statistics on how the service is used, to develop it.

Personal data is not used for advertising or marketing, and it is not sold.

5. Legal basis of data processing

The data controller processes personal data on the grounds of a task carried out in the public interest (GDPR Article 6(1)(e)): supporting sustainable commuting and co-operation within the university community. Optional information, such as a profile photo, a phone number or push notifications, is processed because the user chooses to provide it, and the user can remove it at any time. When the data controller must keep or disclose data under the law, the processing is based on compliance with a legal obligation (Article 6(1)(c)).

[To be confirmed: the legal basis, with LUT's Data Protection Officer.]

6. Content of data and storage periods

Account

- first name and last name;
- LUT or LAB email address, and a new address the user has asked to change to, until it is confirmed;
- password, stored only as a one-way hash, so that it cannot be read;
- when the account was created, when the email address was confirmed and when the user last logged in.

Profile and settings (optional)

- phone number;

- profile photo: the part the user frames is resized and saved again, which removes the photo's metadata, such as where it was taken;
- privacy settings: how the name is shown to other users, whether the photo is shown, and whether the email address and phone number are shared with ride partners;
- whether all notifications or only essential ones are also emailed.

Two-step verification (optional)

- the key shared with the user's authenticator app, and one-time backup codes, used only to check the codes entered when logging in.

Rides

- start, destination and stops on the way: place names and map coordinates;
- the driving route between them, calculated from the coordinates;
- departure and return dates and times, or a recurring ride's days and times;
- ways of travelling, number of seats, price, whether the times are flexible, and a note to passengers;
- who can see the ride: everyone, or only members of chosen groups;
- when the ride was posted and last updated.

Requests to join rides

- the ride, the passenger, the status (waiting, accepted or declined), the message to the driver, the days of a recurring ride the passenger asked for, and when the request was made and answered.

Groups

- the group's name and description, its members and their roles (admin or member), requests to join, and when members joined.

Notifications

- notifications shown in the service: their type, the ride or group they are about, and whether they have been read;
- for push notifications: the push address and encryption keys the user's browser gives, a description of the browser and device, and when they were last used.

Activity log

- records of what users do in the service, such as signing up, logging in, searching, posting a ride or answering a request, with the time, and whether the service was used on a phone or a computer;

- the log holds no names, email addresses, phone numbers, places searched for, messages, IP addresses or browser details: only counts, choices and yes/no values.

Contact form

- the name, email address and message given, and the email address of the account that sent it.

Technical data

- IP address, browser and device information, and times of requests, in the web server's and network provider's logs, used for operating and securing the service.

Storage periods

- Account data is kept until the user deletes the account, which they can do themselves on the profile page. Deleting the account deletes the profile, photo, rides posted, requests, group memberships, notifications, push subscriptions and two-step verification data.
- Activity log records of a deleted account are kept without any link to the user. All activity log records lose their link to the user and the ride after two (2) years, and are then kept only as anonymous statistics.
- Push subscriptions are deleted when the browser reports that they are no longer in use.
- [To be confirmed: how long accounts that are never confirmed, and accounts that are no longer used, are kept.]
- [To be confirmed: how long contact form messages, server and network logs, and backups are kept.]

7. Information systems used

LUT Kyyti web service (kyyti.net) and its database. Usage statistics are viewed in Metabase, run by the service, which can only read pseudonymised views of the data: user IDs, email domains, counts and settings, without names, email addresses or phone numbers.

[To be confirmed: the hosting provider and where the servers are located.]

8. Sources of information

- the user, when signing up and using the service;
- the service itself, such as times, request statuses and the activity log;
- map services, from which the user chooses places (Google Maps Platform and Digitransit), and the route calculated from them;
- the user's browser and device, automatically.

9. Visibility of information to other users

The service can only be used by signed-in users with a confirmed LUT or LAB email address.

- All signed-in users see a user's name as the user has chosen to show it (by default the first name and the initial of the last name), their profile photo if they allow it, the rides they can see (rides posted to everyone, and rides posted to groups they belong to), and the names, descriptions and admins of groups.
- Ride partners, that is a driver and the passengers the driver has accepted, see each other's full names and the contact details each has chosen to share. The email address is shared by default and the phone number is not; both can be changed in the settings.
- A driver sees the messages and chosen days of those who ask to join the ride.
- Group members see the group's other members.
- Email addresses and phone numbers are not shown anywhere else.
- The service's administrators can access personal data only as far as needed for maintenance, support, security and statistics. Administrators must log in with two-step verification.

10. Use of cookies

The service only uses cookies and browser storage needed for it to work: a session cookie that keeps the user logged in (for two weeks at most), a security cookie that protects forms, a cookie for the chosen language, and browser storage for the chosen colour theme and for files the app keeps for faster loading. The network provider Cloudflare may set cookies needed for security, and its human verification is used on the contact form. No advertising or tracking cookies are used. Users may block cookies in their browser, but the service may then not work.

[To be confirmed: whether Cloudflare Web Analytics is turned on for the site.]

11. Data transfer and disclosure

The following service providers process personal data on behalf of the data controller:

- Cloudflare, Inc.: network, protection against attacks, and human verification on the contact form (IP address and technical data);
- Resend: sending the service's emails (email address and the content of the email);
- Google (Google Maps Platform): the map and place search, used directly from the user's browser (search text and technical data), and route

calculation, to which the service sends the ride's coordinates without any information about the user;
- Digitransit: place search, to which the service forwards the search text without any information about the user;
- the push services of the browser's maker (Google, Mozilla, Apple or Microsoft) deliver push notifications to devices; their content is encrypted so that the push service cannot read it;
- [To be confirmed: the hosting provider.]

Personal data may also be disclosed to authorities when the law requires it. It is not disclosed for marketing.

12. Data transfer and disclosure beyond the EU or EEA

Cloudflare, Resend, Google, Mozilla, Apple and Microsoft are based in the United States, and personal data may be transferred there. Such transfers rely on the EU–US Data Privacy Framework or on the European Commission's standard contractual clauses.

[To be confirmed: the safeguard used for each provider, and whether EU data locations can be chosen.]

13. Safeguards for data processing

- connections to the service are encrypted (HTTPS);
- passwords are stored only as one-way hashes, and repeated wrong passwords make logging in wait;
- users can turn on two-step verification, and administrators must use it;
- access to the data is limited to authorised administrators, as far as their duties require;
- profile photos are only shown to signed-in users, as the user has chosen;
- the activity log is kept without personal details and becomes anonymous after two years;
- the software and its components are kept up to date.
- [To be confirmed: backups and how they are protected.]

14. Automated decision-making

No automated decision-making or profiling with legal or similarly significant effects takes place.

15. Rights of the data subject

Data subjects have the following rights under the EU's General Data Protection Regulation:

- a) Right of access to data concerning the data subject (article 15)
- b) Right to rectification of data (article 16)
- c) Right to erasure of data (article 17)
- d) Right to restriction of processing (article 18)
- e) Right to data portability to another data controller (article 20)
- f) Right to object (article 21)

Data subject's rights under the EU's General Data Protection Regulation do not automatically apply to all data processing. Where processing is based on consent, the data subject may withdraw it at any time.

Users can see and correct their own data, change their settings, and delete their account themselves on the profile page of the service. Other requests can be made with LUT's data protection forms (www.lut.fi/en/data-protection). The liaison in matters related to the data subject's rights is the data protection officer; contact details in section 3.

Data subjects have the right to lodge a complaint with the Data Protection Ombudsman if they consider that the processing of their data breaches data protection legislation (www.tietosuoja.fi).

16. Changes to this privacy notice

This privacy notice is updated when the service or the processing of personal data changes. The latest version is always available in the service.

NOT LEGALLY BINDING

This privacy notice is a draft for review. It is not legally binding, and it does not create rights or obligations for LUT University or the users of LUT Kyyti.
